

Term	Week	Chapter	Section	Spread
Autumn term	1 & 2	Chapter 1 – Algebra 1	1	Argument and proof
			2	Index laws
			3	Surds
	3 & 4		4	Quadratic functions
			5	Simultaneous equations

Autumn term

6 & 5

**Polynomials and the
Binomial theorem**

Ch

3

Algebraic division

2

The binomial theorem

1

Expanding and factorising

7

Inequalities

6

Lines and circles

Autumn term

10 & 9

8 & 7

Chapter 3 – Trigonometry

Chapter 2 – Polynomials & Binomial Theorem

1

Differentiation from first principles

2

The sine and cosine rules

1

Sine, cosine and tangent

4

Curve sketching

Autumn term	11 & 12	Chapter 4 – Differentiation and integration	2	Differentiating ax^n and Leibniz notation
			3	Rates of change
			4	Tangents and normals
Spring term	13 & 14		5	Turning points
			6	Integration
			7	Area under a curve
				1

Spring term

15
&
16

Chapter 5 – Exponentials and logarithms

4 Curve fitting

3 Exponential processes

2 Exponential functions

Spring term

17 & 18	Chapter 6 – Vectors	1	Definitions and properties
		2	Components of a vector
19 & 20	and kinematics	1	Standard units and basic dimensions
		2	Motion in a straight line – definitions and graphs

Spring term

**21
&
22**

20

Newton's laws

Chapter 7 – Units a

2 Dynamics

1 Forces

4 Motion with variable acceleration

3 Equations of motion for constant acceleration

Summer term		g and interpreting data	2	Central tendency and spread
			1	Sampling
Spring term	23 & 24	Chapter 8 – Forces and	4	Systems of forces
			3	Motion under gravity

Summer term	25 & 26	Chapter 9 – Collecting, representing	3	Single-variable data
			4	Bivariate data
	27	and discrete random	1	Probability

Summer term	27 & 28	Chapter 10 – Probability a variable	2	Binomial distribution
			1	Formulating a test
	29 & 30	Chapter 11 – Hypothesis testing 1	2	The critical region

Objectives	Syllabus ref
<ul style="list-style-type: none"> • Construct and present mathematical arguments through appropriate use of diagrams; sketching graphs; logical deduction; precise statements involving correct use of symbols and connecting language, including: constant, coefficient, expression, equation, function, identity, index, term, variable. • Comprehend and critique mathematical arguments, proofs and justifications of methods and formulae, including those relating to applications of mathematics. • Understand and use the structure of mathematical proof, proceeding from given assumptions through a series of logical steps to a conclusion; use methods of proof, including proof by deduction, proof by exhaustion, disproof by counter example. 	OT1.1 [c, d] OT1.5 [a, b] A1 [a - d]
<ul style="list-style-type: none"> • Understand and use the laws of indices for all rational exponents. 	B1 [a]
<ul style="list-style-type: none"> • Use and manipulate surds, including rationalising the denominator. 	B2 [a, b]
<ul style="list-style-type: none"> • Work with quadratic functions and their graphs; the discriminant of a quadratic function, including the conditions for real and repeated roots; completing the square; solution of quadratic equations including solving quadratic equations in a function of the unknown. • Understand the effect of simple transformations on the graph of $y = f(x)$ including sketching associated graphs: $y = af(x)$, $y = f(x) + a$, $y = f(x + a)$, $y = f(ax)$. 	B3 [a - g] B9 [a - d]
<ul style="list-style-type: none"> • Construct and present mathematical arguments through appropriate use of diagrams; sketching graphs; logical deduction; precise statements involving correct use of symbols and connecting language, including: constant, coefficient, expression, equation, function, identity, index, term, variable. • Understand, interpret and extract information from diagrams and construct mathematical diagrams to solve problems, including in mechanics. • Solve simultaneous equations in two variables by elimination and by substitution, including one linear and one quadratic equation. • Understand and use graphs of functions; sketch curves defined by simple equations including polynomials, the modulus of a linear function, $y = a/x$ and $y = a/x^2$ and (including their vertical and horizontal asymptotes); interpret algebraic solution of equations graphically; use intersection points of graphs to solve equations Understand and use proportional relationships and their graphs. 	OT1.1 [b] OT2.7 [a, b] B4 [a - c] B7 [g]

<ul style="list-style-type: none"> • Understand and use graphs of functions; sketch curves defined by simple equations including polynomials, $y = a/x$ and $y = a/x^2$ and (including their vertical and horizontal asymptotes); interpret algebraic solution of equations graphically; use intersection points of graphs to solve equations. Understand and use proportional relationships and their graphs. • Understand and use the equation of a straight line, including the forms $y - y_1 = m(x - x_1)$ and $ax + by + c = 0$; gradient conditions for two straight lines to be parallel or perpendicular Be able to use straight line models in a variety of contexts. • Understand and use the coordinate geometry of the circle including using the equation of a circle in the form $(x - a)^2 + (y - b)^2 = r^2$; completing the square to find the centre and radius of a circle; use of the following properties: o the angle in a semicircle is a right angle 	<p>B7 [c]</p> <p>C1 [a - e]</p> <p>C2 [a - e]</p>
<ul style="list-style-type: none"> • Construct and present mathematical arguments through appropriate use of diagrams; sketching graphs; logical deduction; precise statements involving correct use of symbols and connecting language, including: constant, coefficient, expression, equation, function, identity, index, term, variable. • Understand and use language and symbols associated with set theory, as set out in the glossary. Apply to solutions of inequalities. (see B5 [g]) • Understand, interpret and extract information from diagrams and construct mathematical diagrams to solve problems, including in mechanics. • Solve linear and quadratic inequalities in a single variable and interpret such inequalities graphically, including inequalities with brackets and fractions. Express solutions through correct use of 'and' and 'or', or through set notation. Represent linear and quadratic inequalities such as $y > x + 1$ and $y = ax^2 + bx + c$ graphically. 	<p>OT1.1 [b]</p> <p>OT1.3 [b]</p> <p>OT2.7 [a, b]</p> <p>B5 [a - i]</p>
<ul style="list-style-type: none"> • Manipulate polynomials algebraically, including expanding brackets and collecting like terms, factorisation and simple algebraic division; use of the factor theorem. 	<p>B6 [a, b]</p>
<ul style="list-style-type: none"> • Understand and use mathematical language and syntax as set out in the glossary. • Evaluate, including by making reasoned estimates, the accuracy or limitations of solutions, including those obtained using numerical methods. • Understand and use the binomial expansion of $(a + bx)^n$ for positive integer n; the notations $n!$ and ${}^n C_r$; link to binomial probabilities. 	<p>OT1.2 [a]</p> <p>OT2.5 [a]</p> <p>D1 [a - c]</p>
<ul style="list-style-type: none"> • Manipulate polynomials algebraically, including expanding brackets and collecting like terms, factorisation and simple algebraic division; use of the factor theorem. 	<p>B6 [c, d]</p>

<ul style="list-style-type: none"> • Construct and present mathematical arguments through appropriate use of diagrams; sketching graphs; logical deduction; precise statements involving correct use of symbols and connecting language, including: constant, coefficient, expression, equation, function, identity, index, term, variable. • Understand, interpret and extract information from diagrams and construct mathematical diagrams to solve problems, including in mechanics. • Understand and use graphs of functions; sketch curves defined by simple equations including polynomials, $y = a/x$ and $y = a/x^2$ and (including their vertical and horizontal asymptotes); interpret algebraic solution of equations graphically; use intersection points of graphs to solve equations. Understand and use proportional relationships and their graphs. • Understand the effect of simple transformations on the graph of $y = f(x)$ including sketching associated graphs: $y = a f(x)$, $y = f(x) + a$, $y = f(x + a)$, $y = f(ax)$. 	<p>OT1.1 [b]</p> <p>OT2.7 [a]</p> <p>B7 [a, b, d - i]</p> <p>B9 [a - d]</p>
<ul style="list-style-type: none"> • Understand and use mathematical language and syntax as set out in the glossary. • Understand, interpret and extract information from diagrams and construct mathematical diagrams to solve problems, including in mechanics. • Understand the effect of simple transformations on the graph of $y = f(x)$ including sketching associated graphs: $y = a f(x)$, $y = f(x) + a$, $y = f(x + a)$, $y = f(ax)$. • Use of functions in modelling, including consideration of limitations and refinements of the models. • Understand and use the definitions of sine, cosine and tangent for all arguments; the sine and cosine rules; the area of a triangle in the form $1/2 ab \sin C$. • Understand and use the sine, cosine and tangent functions; their graphs, symmetries and periodicity. • Understand and use $\tan \theta = \sin \theta / \cos \theta$, Understand and use $\sin^2 \theta + \cos^2 \theta = 1$. • Solve simple trigonometric equations in a given interval, including quadratic equations in sin, cos and tan and equations involving multiples of the unknown angle. 	<p>OT1.2 [a]</p> <p>OT2.7 [a, b]</p> <p>B9 [a - d]</p> <p>B11 [a]</p> <p>E1 [a]</p> <p>E3 [a - d]</p> <p>E5 [a, b]</p> <p>E7 [a - b]</p>
<ul style="list-style-type: none"> • Comprehend and critique mathematical arguments, proofs and justifications of methods and formulae, including those relating to applications of mathematics. • Understand and use the definitions of sine, cosine and tangent for all arguments; the sine and cosine rules; the area of a triangle in the form $1/2 ab \sin C$. 	<p>OT1.5 [b]</p> <p>E1 [b - d]</p>
<ul style="list-style-type: none"> • Understand and use the derivative of $f(x)$ as the gradient of the tangent to the graph of $y = f(x)$ at a general point (x, y); the gradient of the tangent as a limit; interpretation as a rate of change; sketching the gradient function for a given curve; second derivatives; differentiation from first principles for small positive integer powers of x. Understand and use the second derivative as the rate of change of gradient. • Differentiate x^n, for rational values of n, and related constant multiples, sums and differences. 	<p>G1 [a - c, f]</p> <p>G2 [a]</p>

<ul style="list-style-type: none"> • Understand and use mathematical language and syntax as set out in the glossary. • Differentiate x^n, for rational values of n, and related constant multiples, sums and differences. 	<p>OT1.2 [a]</p> <p>G2 [a]</p>
<ul style="list-style-type: none"> • Understand, interpret and extract information from diagrams and construct mathematical diagrams to solve problems, including in mechanics. • Use a mathematical model with suitable inputs to engage with and explore situations (for a given model or a model constructed or selected by the student). • Understand and use the derivative of $f(x)$ as the gradient of the tangent to the graph of $y = f(x)$ at a general point (x, y); the gradient of the tangent as a limit; interpretation as a rate of change; sketching the gradient function for a given curve; second derivatives; differentiation from first principles for small positive integer powers of x. Understand and use the second derivative as the rate of change of gradient. 	<p>OT2.7 [a]</p> <p>OT3.2 [a]</p> <p>G1 [c - e, h]</p>
<ul style="list-style-type: none"> • Apply differentiation to find gradients, tangents and normals, maxima and minima and stationary points. Identify where functions are increasing or decreasing. 	<p>G3 [a, b]</p>
<ul style="list-style-type: none"> • Understand and use the derivative of $f(x)$ as the gradient of the tangent to the graph of $y = f(x)$ at a general point (x, y); the gradient of the tangent as a limit; interpretation as a rate of change; sketching the gradient function for a given curve; second derivatives; differentiation from first principles for small positive integer powers of x.
